

Bayesian Epistemic Evaluation: Mutual Information (BALD), AUROC & Prior Reversion

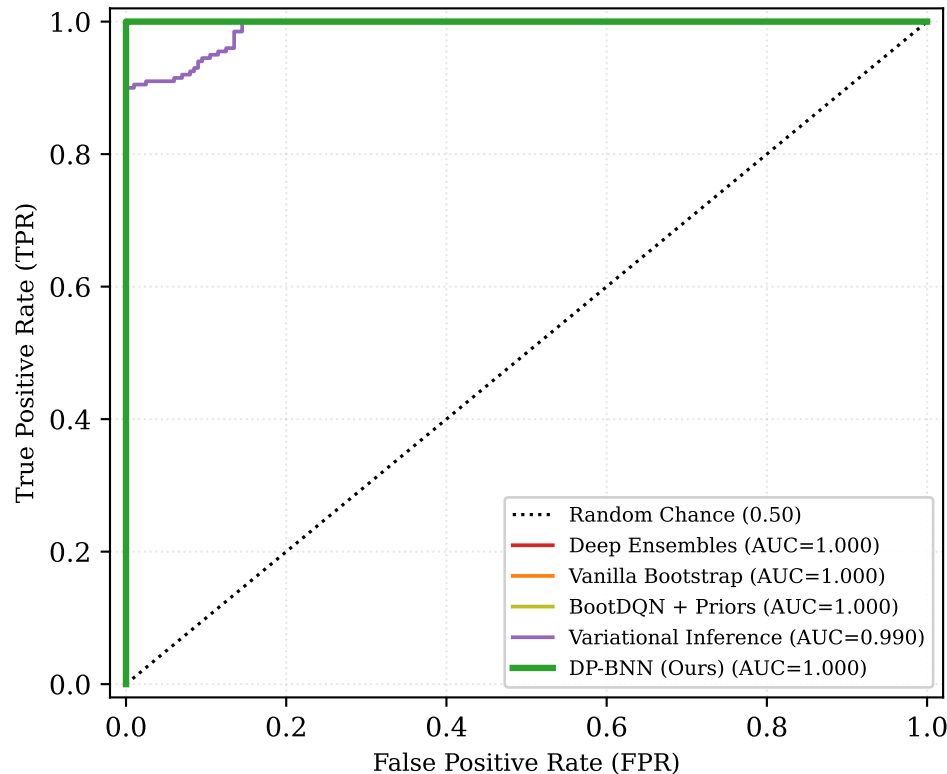

(a) Epistemic Mutual Information (BALD)

$$\mathcal{I}(y; f | x) = \frac{1}{2} \ln(1 + \sigma^2 / \sigma_0^2)$$

(b) Unvisited State Discrimination (ROC)

[Label: Visited=0, Void=1, Score: $\sigma(x)$]

(c) Bayesian Uncertainty Benchmark

[Higher AUROC = Better, Lower $\mathcal{W}_2$ = Better]
